Analysis

[*Analysis-1*] - What do I know or don't know about (all of) you and how?

[*Analysis-2*] - What do I know or don't know about affected others and how?

[*Analysis-3*] - What do I know or don't know about the intended (and other anticipated) contexts of use?

[*Analysis-4*] - What ethical questions can be raised by what I have learned?

Design

[*Design-1*]: What have I designed for you?

[*Design-2*]: Which of your goals have I designed the system to support?

[*Design-3*]: In what situations/contexts do I intend/accept you will use the system to achieve each goal? Why?

[*Design-4*]: How should you use the system to achieve each goal, according to my design?

[*Design-5*]: For what purposed do I not want you to use the system?

[*Design-6*]: What ethical principles influenced my design decisions?

[*Design-7*]: How is the system I designed for you aligned with those ethical considerations?

Implementation & Prototyping

[*Implementation-1*]: How have I built the system to support my design vision?

[*Implementation-2*]: What have I built into the system to prevent undesirable uses and consequences?

[*Implementation-3*]: What have I built into the system to help identify and and remedy unanticipated negative effects?

[*Implementation-4*]: What ethical scenarios have I used to evaluate the system?

Evaluation & Maintenance

[*Evaluation-1*]: How much of my vision is reflected in the system's actual use?

[*Evaluation-2*]: What unanticipated uses have been made? By whom? Why?

[*Evaluation-3*]: What antcipated and unanticipated effects have resulted from its use? Whom do they affect? Why?

[*Evaluation-4*]: What ethical issues need to be handled through system redesign, redevelopment, policy or even decommisioning?
